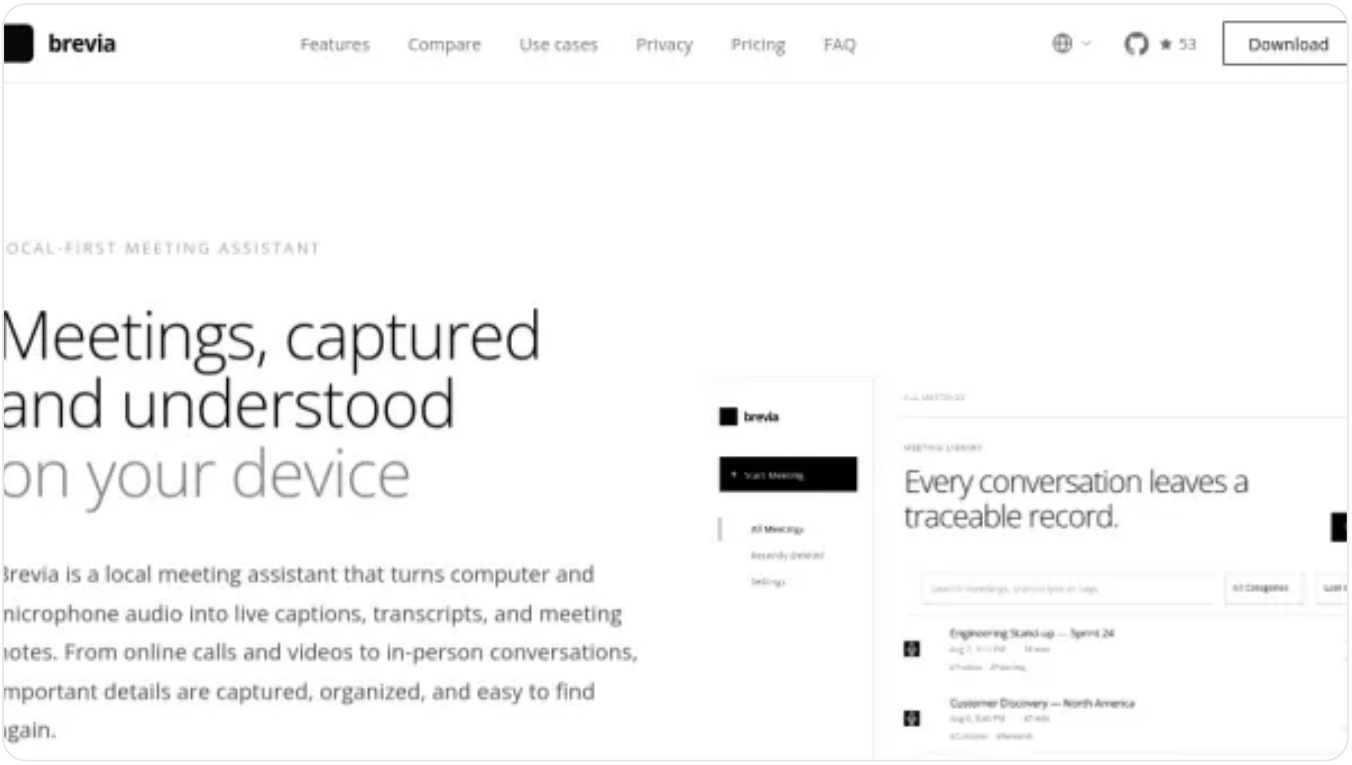
Brevia

Desktop AI meeting assistant with live transcription, multilingual notes, and speaker identification — audio stays on your device.



About

Brevia is an AI meeting assistant for desktop that provides live transcription, multilingual notes, and speaker identification without sending audio off your device. The official site emphasizes that no audio leaves your device, making privacy a core design choice. It is aimed at professionals who need meeting documentation without cloud uploads.

What is Brevia

Brevia is a desktop AI meeting assistant that processes spoken dialogue locally to create real-time transcriptions, multilingual meeting notes, and speaker attributions. According

aimed at professionals who need meeting documentation without cloud uploads. The product is available via brevia.work, with an English and Chinese interface hinted by the redirect page. Specific OS support, pricing, or feature depth beyond the tagline are not documented in the source material.

Key features of this AI meeting assistant

- Live transcription: converts speech to text as the meeting happens.
- Multilingual notes: generates summaries or notes in more than one language (specific languages not listed).
- Speaker identification: distinguishes between participants for clear attribution.
- On-device audio processing: the tagline states "no audio leaves your device," indicating local processing of audio data.
- Desktop focus: designed as a desktop application, not a web or mobile service.

How to use it

Since detailed onboarding is not provided, the likely workflow based on the product tagline is:

- Download and install the Brevia desktop app from the official site.
- Start a meeting or select an audio input source.
- Let the assistant transcribe live speech and identify speakers in real time.
- Review or export the multilingual notes after the meeting.
- Everything runs locally, so no internet connection is needed for audio processing.

Who it is for

- Professionals in international or multilingual teams.
- Individuals who cannot use cloud transcription services due to confidentiality rules.
- Anyone who wants automatic meeting notes without sharing sensitive discussions.

What to know before you use it

Accuracy depends on audio quality, accents, background noise, and microphone setup.

The source material does not specify supported languages, speaker enrollment process, export formats, or system requirements.

"No audio leaves your device" is a strong privacy claim, but independent verification is not available; treat it as a vendor assertion.

Speaker identification may require each speaker to be enrolled or may only label generic speakers; details are unknown.

For critical decisions, always verify transcriptions and notes against the original recording or official minutes.

Brevia does not appear to offer cloud storage or collaboration features, but this is not confirmed. Always test any desktop AI meeting assistant, including Brevia, with your actual meeting environment before relying on it.
